Growing recommendations

KOMBIA demonstrates an outstanding yield regularity in our network all over Europe. It especially excel in high yield situations. With its good early vigor and very good stem elongation resistance, KOMBIA is particularly adapted for early sowing

	Optimal conditions	Limited conditions
Adaptation	4 on 4	4 on 4
Density at harvest	30 - 30 Plants/m ²	35 - 40 Plants/m ²

The results and recommendations given in this document are the values based on MAS Seeds R&D network and are intended for general guidance. We cannot assume any liability for the future achievement of these values, as the individual results and the performance may vary in different local growing, soil and weather conditions.
