

OILSEED RAPE

MID EARLY | OSR

KOMBIA

A PROFITABLE HYBRID

YIELD REGULARITY

to achieve your objectives whatever the conditions

RESISTANT TO STEM ELONGATION

adapted for early sowing

RESISTANT TO STEM ELONGATION

adapted for early sowing

MATURITY & TYPE

Type: OGU-INRA
Flowering: Mid Early

OIL CHARACTERISTICS

Oil content: 42-44%
Protein content: 34-36%
GLS content: 15-17

DISEASES

Phoma: 8
Sclerotinia stem: 7
Leaf lighting spot: 7
Dry stem: 7

AGRONOMY

Early vigor: 8
Stem elongation: 9
Growth after winter: Mid-early
Pod shattering: 9
Lodging: 8

1-3 sensitive | 4-6 medium – good | 7-9 tolerant | excellent

GROWING RECOMMENDATIONS

	Optimal conditions	Limited conditions
Adaptation	++++	+++
Density at harvest (pl/m ²)	30-40	35-40

KOMBIA demonstrates an outstanding yield regularity in our network all over Europe. It especially excel in high yield situations. With its good early vigor and very good stem elongation resistance, **KOMBIA** is particularly adapted for early sowing.
